

CROWN

DATA SYSTEMS

Crown Maps

Crown Maps is a powerful integrated Google mapping software technology for dispatchers that provides trucking companies the tools they need for improved truck utilization and increased productivity of drivers.

- Crown Maps integrates the shipment data with Google for dispatchers to be able to view their drivers on Google maps using GPS.
- Dispatchers can view detailed shipment information on a map sorted by driver, routes, pick-up, delivery and unassigned shipments.
- A historical playback can be activated at any time to replay the movement of drivers on their routes.
- Trucks automatically highlight after no movement has occurred during a specified amount of time.
- Build a route in Crown Maps with integrated shipment information to create a driver's manifest.
